

MDxHealth Announces Agreement for ConfirmMDx Testing with Major Academic Medical Center

IRVINE, CA, and HERSTAL, BELGIUM – June 21, 2016 – MDxHealth SA (Euronext: MDXH.BR), announced today that it has entered into an agreement with Duke University Health System regarding the use of its ConfirmMDx for Prostate Cancer test. The test is approved for the management of men with a previous negative prostate biopsy who may be at risk for undetected cancer and are being considered for a repeat biopsy.

“It is critical that well-validated tests, especially those included in the NCCN Guidelines for the early detection of prostate cancer, are available to patients,” stated Judd W Moul, MD, FACS, James H Semans Professor of Surgery, Professor of Anesthesiology, Division of Urology, Department of Surgery, Duke Cancer Institute, Duke University Medical Center. “This test is designed to identify low-risk men who may forego an unnecessary repeat biopsy procedure, but as importantly, the test may help identify men who are at increased risk for high-grade prostate cancer, meriting repeat biopsy and early intervention.”

“Duke Urology is consistently ranked among the top ten hospital urology programs by US News & World Reports, and we are pleased to support the care of their patients with our ConfirmMDx test,” stated Dr. Jan Groen, Chief Executive Officer of MDxHealth. “This now makes eight of the top ten US hospital urology programs offering the ConfirmMDx test.”

About ConfirmMDx® for Prostate Cancer

ConfirmMDx for Prostate Cancer is recommended in the 2016 NCCN Guidelines for Early Detection of Prostate Cancer. The test provides a very high negative predictive value (NPV) of 96% for clinically significant prostate cancers, and 90% NPV for all prostate cancers, as well as prostate map to help guide repeat biopsies. Each year, more than 1 million American men undergo a prostate biopsy with a negative result, however ~30% of those men actually have prostate cancer. The current standard of care for prostate biopsy procedures samples less than 1% of the prostate, leaving men at risk for undetected cancer and leading to a high rate of repeat biopsies. ConfirmMDx helps urologists identify men who may forego an unnecessary repeat biopsy and high-risk men who may benefit from intervention. ConfirmMDx to date nearly has been performed on over 50,000 patients. The test has qualified for Medicare reimbursement and is also available to more than 152 million insured lives via private health insurance plans.

About MDxHealth

MDxHealth is a multinational healthcare company that provides actionable molecular diagnostic information to personalize the diagnosis and treatment of cancer. The company's tests are based on proprietary gene methylation (epigenetic) and other molecular technologies and assist physicians with the diagnosis of cancer, prognosis of recurrence risk, and prediction of response to a specific therapy.
