

MDxHealth Awarded a Federal Supply Schedule Contract for ConfirmMDx for Prostate Cancer

IRVINE, CA, and HERSTAL, BELGIUM – February 01, 2017 – MDxHealth SA (Euronext: MDXH.BR) today announced that it has been awarded a US Federal Supply Schedule Contract for medical laboratory testing services for ConfirmMDx® for Prostate Cancer. The ConfirmMDx test is now available to federal, state, and local government buyers in the US through Medical Laboratory Testing and Analysis Services Schedule 621 II, Contract V797D-70066.

About ConfirmMDx for Prostate Cancer

ConfirmMDx for Prostate Cancer is the first epigenetic, and only tissue-based test in the 2016 NCCN Guidelines for early detection of prostate cancer which addresses false negative biopsy concerns. It is the only molecular diagnostic test that provides a very high negative predictive value (NPV) of 96% for clinically significant prostate cancers, and 90% NPV for all prostate cancers, as well as prostate mapping of the test results to help guide repeat biopsies. Each year, more than 1 million American men undergo an invasive prostate biopsy with a negative result, however approximately 30% of those men actually have prostate cancer. The current standard of care for prostate biopsy procedures samples less than 1% of the prostate, leaving men at risk for undetected cancer and leading to a high rate of repeat biopsies, even on cancer-free men. ConfirmMDx for Prostate Cancer helps urologists identify low-risk men who may forego an unnecessary repeat biopsy and high-risk men who may benefit from intervention. To date more than 3,000 urologists have ordered ConfirmMDx on more than 45,000 patients. ConfirmMDx has qualified for Medicare reimbursement and covered by numerous private health insurance plans.

About MDxHealth

MDxHealth is a multinational healthcare company that provides actionable molecular diagnostic information to personalize the diagnosis and treatment of cancer. The company's tests are based on proprietary gene methylation (epigenetic) and other molecular technologies and assist physicians with the diagnosis of cancer, prognosis of recurrence risk, and prediction of response to a specific therapy.
